Kyle Glasper

Senior Full Stack Software Engineer | Python & TypeScript | Linux, REST APIs, CI/CD
Baltimore, MD • (708) 543-8740 • ksglasper@gmail.com • kyleglasper.com • github.com/ksglasper

PROFESSIONAL SUMMARY

Senior Full-stack software engineer with 3+ years building and operating production systems in Python and TypeScript on Linux. At Innovare, built a BigQuery ingest pipeline handling files over 500k rows, cut API response times from 20s to under 1s on a query-heavy analytics platform, and overhauled CI/CD across a monorepo and multiple services. Comfortable owning work end-to-end from API design through testing, deployment, monitoring, and production debugging.

TECHNICAL SKILLS

Languages: Python, TypeScript/JavaScript, SQL, Bash, Java, C++, HTML, CSS/Sass

Frontend: React, AG Grid, Recharts, Material UI

Backend & Data: FastAPI, Flask, Django, SQLAlchemy, Node.js, Spring Boot, PostgreSQL, BigQuery, Redis (Memorystore), Cube.js

Cloud & DevOps: GCP, Cloud Run, Cloud Scheduler, Firebase, Linux/WSL, Docker, Terraform, GitHub Actions, Sentry, Grafana, Jira

Testing: pytest, Jest, Vitest, React Testing Library, k6, Selenium

AI & ML: Vertex AI, natural-language query generation

PROFESSIONAL EXPERIENCE

Innovare — Social Innovation Partners (Jun 2024 – Present)

Senior Full Stack Software Engineer – Chicago, IL.

- Built a self-service data ingest pipeline (Flatfile + BigQuery) processing CSVs of 500k+ rows, cutting customer data turnaround from 3 days to under 15 minutes.
- Designed a Redis caching layer for Cube.js and AG Grid queries, dropping API response times from 20s to under 1s and reducing monthly infrastructure costs from $3.5k to $400.
- Shipped a natural-language cohort builder letting ~200 school administrators query student data without SQL, replacing a manual discovery process.
- Migrated a core improvement-planning service to a Python backend, designing the REST API in FastAPI with SQLAlchemy as the ORM.
- Wrote unit and integration tests across the stack: pytest for Python services, Jest for Node backends, Vitest and React Testing Library on the frontend.
- Configured Sentry across multiple projects and environments with per-service error tracking and alerting; used k6 and Grafana for load testing and benchmarking.
- Overhauled CI/CD pipelines for a monorepo and multiple services so any engineer could ship independently after learning one flow; enforced credential-based access controls on production deploys.
- Built Terraform modules automating GCP project provisioning, enforcing VPC-level network isolation to meet student data protection requirements.

Nestlé Professional (Oct 2022 – Jun 2024)

Microbiologist and Raw Material Technician – Chicago, IL.

- Automated label production with Excel VBA, saving 2 hours of manual processing daily; connected Quality Lab procedures in SAP to Nestlé's Digital Manufacturing Operations software.

Nufarm Americas (Feb 2017 – Apr 2022)

Quality Control Analyst – Chicago Heights, IL.

PROJECTS

Football League Stat Tracker (Jan 2023 – Present)

Sole Developer | Data Visualization App | TypeScript, React, Python, Firebase, Cloud Run.

- Designed the full data architecture solo: scraping, transformation, storage, and visualization. Decoupled ingestion from rendering so the UI serves pre-computed data instantly.

EDUCATION

University of Illinois Chicago (May – Aug 2022)
Full-Stack Web Development Certificate – Chicago, IL.

Michigan Technological University (Aug 2012 – Aug 2016)
B.S., Biochemistry & Molecular Biology – Houghton, MI.
